

**Irrigation Components International
proudly offers the SeaMetrics line
of electromagnetic flow meters.**

SeaMetrics, Inc. is a designer, manufacturer, and marketer of a wide variety of flow metering products. Since 1989, the privately-held corporation has served diverse markets, including industrial water treatment, energy management, irrigation, utilities, food processing, and chemical handling, its irrigation products being handled exclusively through Irrigation Components International.

The Seametrics flow meter product line provides a quality measuring tool, telemetry-ready capabilities, and a strong backing of service and support to its users at a price which is refreshingly reasonable to the electromagnetic flow meter market. With ease of installation, advanced technological capabilities, accuracy at or near 1% on most of its products, and extensive retro-fitting capabilities due to decreased straight pipe necessity, this meter is leading the way in the Irrigation world.
